

What to *expect* from treatment

This is helpful information about what to expect after receiving your injection of Strontium89. Keep these instructions handy—either on your refrigerator or taped to your bathroom mirror, so special care instructions are top of mind.

After treatment

There are no restrictions regarding being in the presence of other people after receiving Strontium89. However, you will need to receive a blood test once every other week after injection to monitor your white blood cell and platelet counts. Don't worry if you don't feel pain relief right away; many patients report relief within 7 to 20 days.

Because Strontium89 is eliminated via bodily fluids such as urine and feces, follow good hygiene practices to avoid radiation exposure immediately after injection and for 2 weeks thereafter.

INDICATION

Strontium89 (Strontium Chloride Sr-89 Injection, USP) is used for the relief of bone pain in patients with bone metastases. You should only use Strontium89 if you have been diagnosed with metastatic bone cancer.

IMPORTANT SAFETY INFORMATION

Strontium89 may affect bone marrow and may cause white blood cell and platelet counts to be lower than normal. To monitor these effects, your doctor will perform regular blood tests before and after your injection, usually at least every other week until your levels have recovered. This may take up to 6 months. Your doctor will decide if it is safe for you to get a repeat injection, 90 days later, if needed. If you already have seriously decreased bone marrow function, your doctor may decide that you should not receive Strontium89.

Please see reverse side for additional Important Safety Information and visit Strontium89.com for full [Prescribing Information](#).

For 2 weeks after injection, it's important to:

Wash hands thoroughly every time you use or clean the bathroom.

Men and women should sit on the toilet and flush twice when using the bathroom. Men should avoid using urinals.

Wear gloves and gowns if cleaning up bodily waste.

If sheets and clothing become soiled with bodily fluids, wash them right away and separately from other clothes.

Wash away any blood if you cut or injure yourself and apply a bandage.
